

OSTRANDER POINT WIND ENERGY PROJECT

Gilead Power is working towards the development of up to 12 wind turbines at Ostrander Point in Prince Edward County. This project will span approximately 324 hectares of Crown land.

Altogether, the turbines will be able to generate approximately 20 MW of clean electricity - enough to power 5,000 typical homes.

This map shows the proposed location of the turbines. Views are also shown on display boards 11 and 12.
